

## Highlights

## Protect your environment from contamination

Pests such as rodents carry a range of bacteria and viruses and potentially spread harmful pathogens through their urine, stains, droppings or faeces. As a result, public may face a risk of food or water contamination.

It is important to understand that there may be some disease-causing organisms found in the waste left behind by pests, and while the presence of pest is not visible to public, we should consider health and safety assurance by utilising biocidal disinfection solution to reduce disease-causing organisms.

## Non-corrosive Pest Disinfectant Solution

**Pest Disinfection Solution**, a non-corrosive and non-stainable treatment effectively removes bacteria, viruses, mould and fungi. Safe to apply on most surfaces such as soft metals, plastics and fabric, the solution contains a **Reactive Barrier Technology** that is fast acting and kills 99.9999% of harmful micro-organisms, and providing a long term protection against the spread of diseases.

Some hot spots that requires additional food safety in your environment includes the kitchen, pantry, storeroom and seating area.

## Did you know?

Birds and rodents may carry various disease-causing pathogens that can pose health and safety risks to public.
